

Gediminas Jasinevičius is a graduate of the Faculty of Social Science and Business Studies of the University of Eastern Finland (PhD in the field of environmental policies). His research focus is carbon accounting in wood products and how wood use could mitigate climate change and support bioeconomy. Since 2013, he worked at the European Forest Institute and was involved in various international projects analysing effect of wood use. In 2017 he was also supporting FOREST EUROPE Liaison Unit in various Pan-European forest policy related tasks. From June 2019, he is involved in the research project on bio-char use at the Norwegian Institute for Bioeconomy.
