

Prof. dr. (HP) Arvydas Povilaitis

Arvydas Povilaitis is a Professor of Water Resources Engineering Institute at Vytautas Magnus University. Member of the Lithuanian Academy of Sciences. His research has focused on hydrology, water quality and modelling of water ecosystems. He is interested in the impact of watershed management practices on water quality and how climate and land use change affect water quality and quantity. More recently he has concentrated on “nature-driven” technologies aiming to biologically remove nutrients from tile drainage water.
